

WILLIAM TABER

Wrestling challenges of Engineering

Graduate: Class of 2001

Occupation:Automation Validation Engineering

By Jessica Taber, Spring 2008

William Taber, a 2001 graduate of Forest Park, studied at Indiana State University for four years. He was a part of the 2001 Forest Park graduating class. He is now a resident of Indianapolis, Indiana. His chosen profession is Automation Validation Engineering where he installs automated systems and controls processes and validates for pharmaceutical and medical companies.

Mr. Taber also installs specialized software and computers designed to communicate with specific pieces of hardware. These repairers use hand tools, soldering irons, and other electronic tools to repair and adjust equipment. The tools used are designed to simulate water or air pressure. Faulty circuit boards and other parts are normally removed and replaced. Medical equipment repairers must maintain careful, detailed logs of all maintenance and repairs that they perform on each piece of equipment

While attending Forest Park he took many computer, math and science classes. He was a member of the Students Against Destructive Decisions, was a 4-year varsity wrestler and also participated in Key Club. Forest Park, he said, prepared him for life and the everyday challenges of an engineer.
